WELDING AUTOMATION  
LASER PROCESSING

[www.myrma.eu](http://www.myrma.eu)

## RMA

For many years, we have been a leading supplier of comprehensive solutions in the field of **welding automation and laser processing**.

We offer **tailor-made solutions**, as well as **ready-to-use machines, production lines and stations**. RMA is not a typical integrator – we focus primarily on the selection of optimal technology, we carry out advanced tests and support the development of the new products.

RMA undertakes extensive R&D activity using a **well-equipped welding and material laboratory**. Apart from the technical support which we offer to our Clients worldwide, we are additionally in charge of the development program within AIC.S.A. internally. Our main focus is quality, efficiency and continuous improvement, which is reflected in various certificates, including **ISO 9001: 2015**.

## Team

**Employees are RMA's most valuable asset** - a team of experienced engineers and specialists. **Projects are executed entirely within our company**, including engineering, programming, assembly and start-up. Each project is supervised by a proficient and experienced project manager. We are a well-organized team that focuses on diversity, innovation and the use of complementary competences.

As a result, RMA has developed a substantial know-how in the field of automation and robotization of laser processes which allows our Clients to achieve a competitive advantage and tangible benefits.

## Technology

We focus entirely on **LASER PROCESSING** as our industrial projects are driven by processes such as **welding, 3D cutting, structuring and ablation**.

We continue to develop our know-how in RMA's **Laser Application Center (LTC)** located at our main headquarters. At LTC we perform complex technology tests for our Clients and conduct research on innovative solutions. We utilise modern laser sources, dedicated processing heads and tooling for this purpose.

## Industries

RMA focuses primarily on smart and innovative solutions for the **battery industry**. We are equally active in the automotive segment (e-mobility). Additionally, we provide ready-to-use solutions for the glass industry and the production of heat exchangers.

**If you are not sure whether laser processing could be a good choice for your production area, just contact us!**
